

# YEAR 9 — CONSTRUCTING IN 2D/3D... 3D Shapes

@whisto\_maths

## What do I need to be able to do?

By the end of this unit you should be able to:

- Name 2D & 3D shapes
- Recognise Prisms
- Sketch and recognise nets
- Draw plans and elevations
- Find areas of 2D shapes
- Find Surface area for cubes, cuboids, triangular prisms and cylinders
- Find the volume of 3D shapes

## Keywords

**2D:** two dimensions to the shape e.g length and width

**3D:** three dimensions to the shape e.g length, width and height

**Vertex:** a point where two or more line segments meet

**Edge:** a line on the boundary joining two vertex

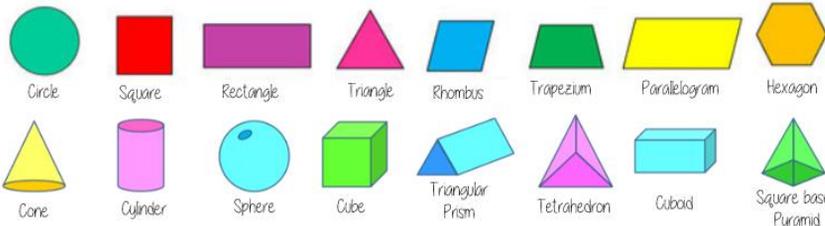

**Face:** a flat surface on a solid object

**Cross-section:** a view inside a solid shape made by cutting through it

**Plan:** a drawing of something when drawn from above (sometimes birds eye view)

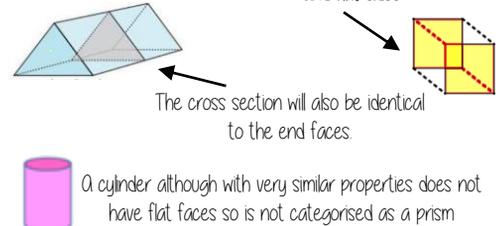

**Perspective:** a way to give illustration of a 3D shape when drawn on a flat surface.

## Name 2D & 3D shapes

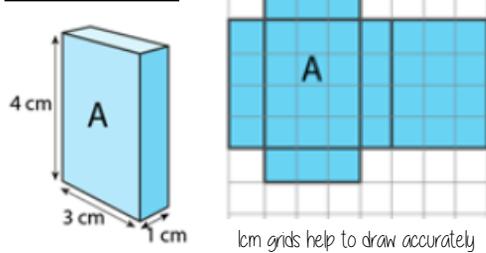

## Recognise prisms

A solid object with two identical ends and flat sides

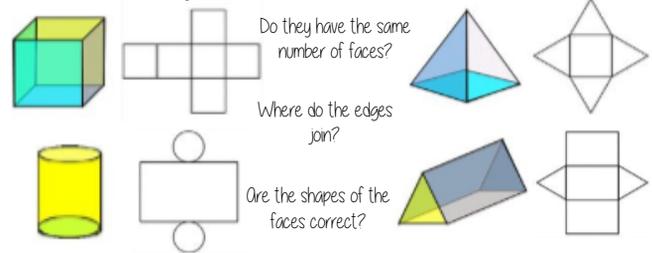

## Nets of cuboids

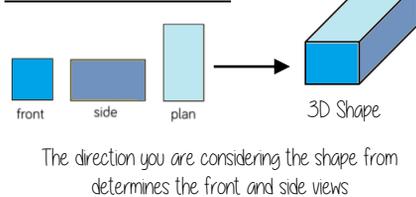

Visualise the folding of the net. Will it make the cuboid with all sides touching

1cm grids help to draw accurately

## Sketch and recognise nets

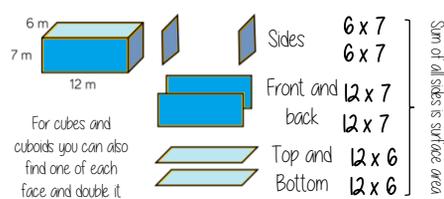

## Plans and elevations

The direction you are considering the shape from determines the front and side views

## Surface area

Sketching nets first helps you visualise all the sides that will form the overall surface area

## Volumes

Volume is the 3D space it takes up — also known as capacity if using liquids to fill the space

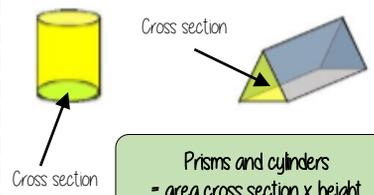

### Counting cubes

Some 3D shape volumes can be calculated by counting the number of cubes that fit inside the shape

**Cubes/ Cuboids = base x width x height**

Remember multiplication is commutative

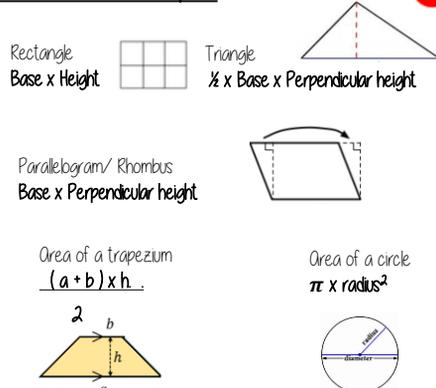

Height can also be described as depth

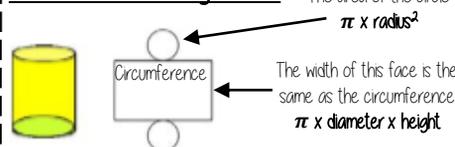

Areas — square units  
Volumes — cube units

Areas and volumes can be left in terms of  $\pi$

## Area of 2D shapes

## Surface area - cylinders

**$2 \times \pi \times \text{radius}^2 + \pi \times \text{diameter} \times \text{height}$**
