

C7: Organic Chemistry 1

ANSWER KEY

17.1	What is crude oil?	A mixture of hydrocarbons
17.2	What is crude oil formed from?	The remains of ancient biomass (mostly plankton)
17.3	Crude oil is a finite resource. What is meant by a finite resource?	One that will run out (non-renewable)
17.4	What is a hydrocarbon?	A compound made of atoms of carbon and hydrogen <u>only</u>
17.5	What is an alkane?	A hydrocarbon with only single bonds
17.6	How many covalent bonds does each carbon atom form in an alkane?	4
17.7	Name the first four alkanes	<ul style="list-style-type: none"> • <u>M</u>ethane (<u>M</u>onkeys) • <u>E</u>thane (<u>E</u>at) • <u>P</u>ropane (<u>P</u>eeled) • <u>B</u>tane (<u>B</u>ananas)
17.8	What is the general formula for alkanes?	C_nH_{2n+2}
17.9	How does boiling point change as alkane molecules get longer?	The longer the molecule, the higher its boiling point
17.10	Why does the boiling point increase?	<ul style="list-style-type: none"> • stronger forces of attraction • <u>between</u> the longer <u>molecules</u> • so more heat energy needed to separate the molecules
17.11	How does viscosity change as alkane molecules get longer?	The longer the alkane, the more viscous (the thicker) it is
17.12	How does flammability change as alkane molecules get longer?	The longer the alkane, the less flammable it is
17.13	What is fractional distillation?	A process used to separate mixtures of substances with different boiling points
17.14	What are the steps involved in fractional distillation?	<ul style="list-style-type: none"> • Crude oil is heated into vapour • which rises up tower, cools, condenses • similar chain lengths condense at similar points on tower • as they have similar boiling points • Smallest molecules stay as gas and collect at top of tower

C7: Organic Chemistry 2

ANSWER KEY

18.1	Why is fractional distillation important?	Because the different fractions have different uses
18.2	What is fuel?	A substance which releases energy when reacted with oxygen
18.3	What is combustion?	The reaction of a fuel with oxygen
18.4	What are the products of complete combustion of hydrocarbon fuels?	Carbon dioxide and water
18.5	When does incomplete combustion occur?	When there is not enough oxygen present
18.6	What are the products of incomplete combustion of hydrocarbon fuels?	Carbon monoxide, carbon and water
18.7	What is cracking?	The process of breaking down a long hydrocarbon into smaller hydrocarbons
18.8	What are the products of cracking?	Short alkanes and alkenes
18.9	Why is cracking important?	Because smaller hydrocarbons are more useful than longer ones
18.10	Why are shorter chain alkanes in higher demand than longer chains?	They are more flammable, and make better fuels
18.11	What are the two types of cracking?	Catalytic and steam cracking
18.12	What are the conditions used for cracking?	High temperature and a catalyst
18.13	What are alkenes?	A different type of (more reactive) hydrocarbon with a double bond
18.14	What are alkenes used for?	As a starting material to make more useful chemicals like polymers (plastics)
18.15	Complete the diagram below showing the formation of poly(ethene) $n \begin{array}{c} \text{H} & \text{H} \\ & \\ \text{C} & = & \text{C} \\ & \\ \text{H} & \text{H} \end{array} \longrightarrow \left(\begin{array}{cc} & \\ \text{C} & \text{C} \\ & \end{array} \right)_n$	$n \begin{array}{c} \text{H} & \text{H} \\ & \\ \text{C} & = & \text{C} \\ & \\ \text{H} & \text{H} \end{array} \longrightarrow \left(\begin{array}{cc} \text{H} & \text{H} \\ & \\ -\text{C} & - & \text{C}- \\ & \\ \text{H} & \text{H} \end{array} \right)_n$ <ul style="list-style-type: none"> • single bonds between all C/H atoms • trailing bonds through brackets
18.16	What is the correct test and observation for an alkene?	<ul style="list-style-type: none"> • add <u>bromine</u> water • orange → colourless

FOUNDATION TIER

Q1. Alkanes are hydrocarbons found in crude oil.

- (a) (i) Complete the sentence. Hydrocarbons contain the elements _____ and _____ only.

(1)

- (ii) Ethane is an alkane with the formula C_2H_6

Draw a ring around the correct answer to complete the sentence.

Alkanes are hydrocarbons with the general formula

(1)

- (b) Crude oil is separated into useful fractions by fractional distillation.

Describe and explain how crude oil is separated into fractions by fractional distillation.

Use the diagram to help you answer the question.

(4)

(6)

Hydrocarbons are cracked to produce more useful alkanes and alkenes.

- (d) Decane ($C_{10}H_{22}$) is cracked to produce **two** products.

Complete the equation for the reaction.

(1)

- (e) C_2H_4 is an alkene.

What is the test for alkenes?

Give the result of the test if an alkene is present.

Test

Result

(2)

(Total 11 marks)

HIGHER TIER

Q3. This question is about crude oil and alkanes.

- (a) Describe how crude oil is formed.

(3)

The table below shows the boiling points of three alkanes.

Alkanes	Boiling point in °C
C ₅ H ₁₂	36
C ₁₀ H ₂₂	174
C ₁₅ H ₃₂	271

- (b) What is the general formula for alkanes?

(1)

- (c) Explain the trend in the boiling points of the alkanes.

(3)

- (d) A student investigated one property of the alkanes C_5H_{12} , $C_{10}H_{22}$ and $C_{15}H_{32}$

This is the method used.

1. Pour 20 cm^3 of C_5H_{12} into a separating funnel.
2. Open the tap of the separating funnel and start a timer.
3. Stop the timer when the level of C_5H_{12} reaches line **X**.
4. Repeat steps 1 to 3 with $C_{10}H_{22}$ and $C_{15}H_{32}$

The diagram below shows the apparatus used.

The level of C_5H_{12} takes 6.4 seconds to reach line **X**.

Predict the trend in times for the other two alkanes.

Give **one** reason for your answer.

Trend _____

Reason _____

(2)
(Total 9 marks)

Q4. This question is about crude oil.

- (a) The table shows information about crude oil fractions.

Crude oil fraction	Number of carbon atoms	Approximate percentage (%) in crude oil	Approximate percentage (%) demand
Gas	1–4	3	4
Petrol	5–10	9	23
Naphtha	8–12	10	5
Kerosene	9–16	14	8
Diesel	15–25	16	22
Residue	20–30+	48	38

Explain the advantage of cracking hydrocarbons.

Give **one** example from the table.

(3)

- (b) Ethene is a product of cracking.

Relative formula mass (M_r) of ethene = 28

Calculate the number of moles of ethene (C_2H_4) in 50.4 kg

Give your answer in standard form.

Numbers of moles = _____

(3)

- (c) $C_{21}H_{44}$ can be cracked to produce ethene.

Relative formula mass (M_r) of $C_{21}H_{44}$ = 296

Calculate the mass of $C_{21}H_{44}$ needed to produce 50.4 kg of ethene.

Mass = _____ kg

(3)

(Total 9 marks)

Mark schemes

Q1.

- (a) (i) hydrogen / H and carbon / C

answers can be in either order

if letters given, must be capital H

1

- (ii) C_nH_{2n+2}

1

- (b) (most) crude oil vaporises / evaporates **or** crude oil enters as a vapour

1

(vapour) cools as it rises up the tower / column **or** tower / column cooler at the top **or** negative temperature gradient

1

the fractions have different boiling / condensation points / ranges

accept the larger the molecules, the higher the boiling point / condensation point

1

so they will condense at different levels in the tower

allow will collect at different levels if condensation mentioned

allow will condense to give different fractions

if no other mark is gained allow 1 mark for mention of heating

1

- (c) (i) C_8H_{18}
if one answer is given C_8H_{18} is the only acceptable answer
credit any correct combination of alkanes and alkenes, eg C_5H_{12} and C_3H_6
1
- (ii) hot / high temperature
accept any temperature in the range 300 – 900 °C
'heat' is insufficient
1
- catalyst
*accept a named catalyst – alumina **or** zeolites **or** aluminosilicates **or** broken pot*
ignore other named catalysts
allow (mixing with) steam as an alternative to second marking point ignore pressure
1
- [9]

Q2.

- (a) plankton
or
 (ancient) biomass
allow microscopic plants / animals
 1
- (b) propane
allow C_3H_8
 1
- (c) **Level 2:** Scientifically relevant features are identified; the way(s) in which they are similar / different is made clear and (where appropriate) the magnitude of the similarity / difference is noted.
 4–6
- Level 1:** Relevant features are identified and differences noted. 1–3 AO1 AO2
 1–3
- No relevant content**
 0
- Indicative content**
- methane has 1 carbon atom, hexane has 6
 - methane has 4 hydrogen atoms, hexane has 14
 - both contain C – H bonds
 - only hexane contains C – C bonds
 - both are hydrocarbons
 - hexane has a higher melting point than methane (or converse)
 - hexane has a higher boiling point than methane (or converse)
 - methane is a gas at room temperature
 - hexane is a liquid at room temperature

- both are small molecules
- hexane has larger molecules than methane
- weak forces between molecules
- forces between hexane molecules stronger than between methane molecules
- hexane is more viscous than methane
- both are flammable
- methane is more flammable than hexane (or converse)
- possible products of combustion from both are: carbon, carbon monoxide, carbon dioxide, water
- neither conduct electricity

(d) C_8H_{18}

1

(e) bromine (water)

1

turns (from orange / brown) to colourless

*MP2 is dependent on MP1 allow decolourises
ignore clear*

1

[11]

Q3.

(a) plankton

*allow biomass
allow (marine) animals / organisms
ignore plants*

1

buried in mud

*allow compressed under mud
allow compressed in sedimentary rock
ignore fossilised*

1

over a long period of time

or

over millions of years

1

(b) C_nH_{2n+2}

1

(c) *max 2 marks for incorrect reference to particles /
bonds*

allow converse

the boiling point increases as the number of (carbon) atoms increases

1

(because the weak) intermolecular forces increase

or

(because the weak) forces between the molecules increase

	1	
(and these intermolecular forces increase) as the size of the molecules increases	1	
(d) <i>MP2 dependent on correct response in MP1</i>		
(as number of carbon atoms increase) the time increases	1	
(because) the viscosity increases	1	
		[9]

Q4.

(a) break large molecules into small molecules	1	
to satisfy demand	1	
example	1	
(b) 50.4 kg = 50 400 g	1	
50 400/28	1	
1.8×10^3	1	
(c) $1.8/3 = 0.6$	1	
0.6×296	1	
= 177.6 kg	1	
		[9]
